Mammal Checklist

The National Park Service cares for special places saved by the American people so that all may experience our heritage.

Mammal Checklist

This checklist includes observations reported by National Park Service employees and visitors since North Cascades National Park Service Complex was established in 1968. A species is listed if at least one sighting has occurred, or a specimen collected. An asterisk (*) denotes a species whose presence is suspected based on its general distribution, but for which there are no records. We encourage you to report mammal sightings to a ranger station, particularly if a species is unlisted.
